

# Discover, Manage & Secure All IT Assets in Real Time

Cyber security starts with an accurate inventory of every IT asset and an up-to-date risk assessment. As the IT environment grows increasingly complex, assets are everywhere: in the data center, head office, branches, and at home. There are more kinds of endpoints, workloads, IoT devices and software components than ever before. At the same time, the risk posture of each asset changes according to where, when and by whom it's used.

Infinipoint's next-generation asset management platform discovers all your assets and enables you to query and update them all in real time. It leverages cutting-edge technology to provide a complete solution for visibility and control across thousands of IT assets for organizations of all sizes, instantly.

## Managing Asset Security is an Interactive, Continuous Process

Infinipoint delivers an iterative process that improves the security posture of your IT assets and provides unprecedented visibility and control to answer any question and address any issue, in seconds.

- **Asset Discovery and Management:** Continuously discover and manage tens of thousands of assets at once, in real time
- **Vulnerability and Risk Management:** Identify and prioritize vulnerabilities and security risks through context-based assessments
- **Interactive Investigation and Remediation:** Query thousands of assets to make real-time changes and assess impact. Remediate, validate and troubleshoot issues
- **Policy Enforcement:** Ensure compliance with required security posture on- and off-premise

## A Single Cloud-Based Solution to Replace Point Products

- ✓ Gain instant visibility into the full inventory and current posture of ALL assets, everywhere
- ✓ Eliminate the riskiest vulnerabilities and security gaps
- ✓ Bridge the gap between IT and security teams
- ✓ Reduce overhead with a simple, cloud-delivered solution

# Instant Time to Value

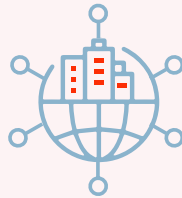

- Ask or run anything on thousands of endpoints in seconds
- Instant deployment; zero configuration
- Unified platform to replace multiple point solutions
- A real-time, rather than a point-in-time solution for asset discovery and management

## Initiatives

### Distributed Workforce

Query and control assets on- and off-premise. Proactively mitigate configuration problems and investigate productivity issues in real time. Ensure corporate assets are compliant anywhere, anytime.

### Branch Management

Discover, manage and remediate risks for IT assets in branches globally, including IoT and unmanaged devices. No appliances needed.

### Endpoint Posture Verification

Gain an up-to date picture of your asset security posture in real time. Continuously enforce compliance with enterprise policy, prior to granting access to the cloud and enterprise networks over VPN or ZTNA.

### Compliance

Identify and report on gaps between current posture and best practices in the CIS benchmark. Report on compliance with regulatory standards such as HIPAA, SOX and PCI DSS.

### Cloud and Data Centers

Discover, manage and secure IT assets across multiple cloud vendors and on-premises data centers. Support organizations in maintaining both on-premise and cloud servers for cloud migration.

### Mergers and Acquisitions

Centrally manage the entire IT estate across companies and streamline infrastructure consolidation. Gain an accurate, granular picture of acquired IT assets and continuously implement security best practices.
